

FOOD & AGRICULTURE

CHUNK 1

Product:

Packaged Drinking Water

Description:

Packaged drinking water is water intended for human consumption that is processed and packaged in sealed containers. It is one of the most important food-and-water safety categories in India.

Applicable IS:

IS 14543:2024

Standard title:

Packaged Drinking Water (Other Than Packaged Natural Mineral Water) — Specification

BIS certification:

De-notified from compulsory BIS certification.

This is a very important 2026 status. BIS's current compulsory-certification page explicitly lists **IS 14543 — Packaged Drinking Water** as de-notified from compulsory BIS certification following changes in the regulatory framework.

Certification scheme:

Previously associated with BIS compulsory certification; current compulsory BIS status is **de-notified**.

Applicable regulatory framework:

Food safety requirements are governed primarily through the **Food Safety and Standards Authority of India (FSSAI)** framework rather than treating BIS certification as universally mandatory.

Current status — August 2026:

BIS certification: Not compulsory.

BIS standard:

The BIS standard remains useful as a technical reference even though compulsory BIS certification has been de-notified.

Product Manual:

BIS maintains product-specific information for applicable standards.

SIT:

Where BIS certification is voluntarily sought/applicable, the relevant BIS product-specific requirements apply.

Required testing:

Typical technical parameters include:

- microbiological quality
- physical characteristics
- chemical parameters
- toxic substances
- pesticide-related requirements
- packaging/container requirements
- treatment/disinfection-related controls

Documents / certification requirements:

For mandatory food compliance, the manufacturer should primarily evaluate the applicable FSSAI licensing and regulatory requirements.

For voluntary BIS certification, BIS application/product-certification requirements apply.

Marking requirements:

Do not tell users that an ISI mark is automatically mandatory for packaged drinking water in 2026.

2026 special note:

This is exactly the type of distinction your AI assistant must make:

“Does packaged drinking water need BIS?”

Correct response should **not simply say YES because IS 14543 exists.**

The assistant must distinguish the existence of an Indian Standard from whether BIS certification is currently compulsory.

Official BIS sources:

[BIS — Products Under Compulsory Certification](#)

[BIS — Know Your Standard](#)

CHUNK 2

Product:

Packaged Natural Mineral Water

Description:

Packaged natural mineral water is water obtained from protected natural underground sources and characterized by its mineral composition. It is different from ordinary packaged drinking water.

Applicable IS:
IS 13428:2024

Standard title:
Packaged Natural Mineral Water — Specification

BIS certification:
De-notified from compulsory BIS certification.

BIS's current compulsory-certification list specifically identifies **IS 13428 — Packaged Natural Mineral Water** as de-notified from compulsory BIS certification.

Certification scheme:
Previously under compulsory BIS certification; current compulsory status is **de-notified**.

Applicable regulatory framework:
Current food/water compliance needs to be evaluated primarily under the applicable **FSSAI** regulatory framework.

Current status — August 2026:
BIS certification: Not compulsory.

BIS standard:
The standard remains an important technical reference.

Product Manual:
Applicable BIS product-specific documentation.

SIT:
Applicable where BIS certification is voluntarily pursued.

Required testing:

- physical characteristics
- chemical composition
- microbiological quality
- toxic substances
- mineral characteristics
- source-related parameters
- packaging/container requirements

Documents / certification requirements:
FSSAI regulatory requirements should be checked for mandatory food compliance.
BIS certification requirements apply separately if voluntary BIS certification is pursued.

Marking requirements:

Do not represent the BIS Standard Mark as universally mandatory for this product in 2026.

2026 special note:

The assistant must distinguish:

Packaged Drinking Water

from

Packaged Natural Mineral Water

They have different BIS standards and different technical definitions.

Official BIS source:

[BIS — Products Under Compulsory Certification](#)

CHUNK 3**Product:**

Milk Powder

Description:

Milk powder is a dairy product manufactured by removing most of the water from milk through controlled processing. Different types are produced according to milk composition and intended use.

Applicable IS:

IS 1165

Standard title:

Milk Powder — Specification

BIS certification:

De-notified from compulsory BIS certification.

BIS's current compulsory-certification list explicitly identifies **IS 1165 — Milk Powder** as de-notified from compulsory certification.

Certification scheme:

Previously compulsory under BIS; currently not compulsory through BIS.

Applicable regulatory framework:

Applicable food-safety requirements are primarily governed by the FSSAI framework.

Current status — August 2026:

BIS certification: Not compulsory.

BIS standard:

Still useful as a technical Indian Standard.

Product Manual:

BIS maintains product-specific information for standards where applicable.

SIT:

Relevant if certification is voluntarily pursued.

Required testing:

Typical quality parameters can include:

- moisture
- milk-fat content
- protein
- acidity
- solubility
- microbiological quality
- contaminants
- adulterants
- packaging requirements

Documents / certification requirements:

For mandatory market compliance, applicable FSSAI requirements must be evaluated.

Marking requirements:

Do not tell the user that an ISI mark is mandatory merely because IS 1165 exists.

2026 special note:

This is a strong example for the assistant's “**BIS standard vs mandatory BIS certification**” distinction.

Official BIS source:

[BIS — Products Under Compulsory Certification](#)

CHUNK 4**Product:**

Condensed Milk

Description:

Condensed milk is a milk product from which part of the water has been removed, with or without added sugar depending on the product type. It is used directly as a food and as an ingredient in other products.

Applicable IS:

IS 1166

Standard title:

Condensed Milk, Partly Skimmed and Skimmed Condensed Milk — Specification

BIS certification:

De-notified from compulsory BIS certification.

BIS's current list identifies **IS 1166** as de-notified from compulsory BIS certification.

Certification scheme:

Previously associated with compulsory BIS certification; current compulsory status is de-notified.

Applicable regulatory framework:

Applicable FSSAI food regulations and licensing requirements.

Current status — August 2026:

BIS certification: Not compulsory.

BIS standard:

Remains available as an Indian Standard/reference.

Product Manual:

Applicable BIS documentation where relevant.

SIT:

Applicable for voluntary BIS certification where pursued.

Required testing:

- milk-fat content
- milk-solids content
- moisture
- acidity
- microbiological requirements
- sugar/content requirements where applicable
- contaminants
- packaging

Documents / certification requirements:

FSSAI requirements should be checked for mandatory food compliance.

Marking requirements:

BIS Standard Mark should not be represented as universally mandatory in 2026.

2026 special note:

The AI must not infer compulsory BIS certification solely from the presence of an IS number.

Official BIS source:

[BIS — Products Under Compulsory Certification](#)

CHUNK 5**Product:**

Skimmed Milk Powder

Description:

Skimmed milk powder is produced from milk with most of the fat removed before drying. It is commonly used in dairy processing, food manufacturing and nutrition products.

Applicable IS:

IS 13334 (Part 1)

IS 13334 (Part 2)

Standard titles:

IS 13334 (Part 1): Skimmed Milk Powder — Standard Grade

IS 13334 (Part 2): Skimmed Milk Powder — Extra Grade

BIS certification:

De-notified from compulsory BIS certification.

BIS's current list identifies both parts as de-notified from compulsory BIS certification.

Certification scheme:

Previously compulsory; currently not compulsory through BIS.

Applicable regulatory framework:

Applicable FSSAI food regulations.

Current status — August 2026:

BIS certification: Not compulsory.

BIS standard:

The standards remain useful technical references.

Product Manual:

Applicable BIS product documentation where relevant.

SIT:

Applicable if voluntary BIS certification is pursued.

Required testing:

- moisture
- milk-fat
- protein
- acidity
- solubility
- microbiological quality
- contaminants
- packaging

Documents / certification requirements:

Applicable FSSAI licensing/compliance documentation for mandatory food regulation.

Marking requirements:

Do not state that the ISI mark is mandatory based solely on these IS numbers.

2026 special note:

The assistant should distinguish **standard grade** and **extra grade** rather than treating all skimmed milk powder as one record.

Official BIS source:

[BIS — Products Under Compulsory Certification](#)

CHUNK 6**Product:**

Infant Milk Substitute

Description:

Infant milk substitutes are specially formulated products intended for feeding infants when breast milk is unavailable or insufficient. Because of their intended use, they are subject to stringent food-safety and labelling requirements.

Applicable IS:

IS 14433

Standard title:

Infant Milk Substitutes — Specification

BIS certification:**De-notified from compulsory BIS certification.**

BIS's current compulsory-certification list identifies IS 14433 as de-notified.

Certification scheme:

Previously compulsory BIS certification; current BIS compulsory status is de-notified.

Applicable regulatory framework:

Applicable FSSAI regulations and other specific legal requirements governing infant foods.

Current status — August 2026:**BIS certification: Not compulsory.****BIS standard:**

Remains an Indian Standard/reference.

Product Manual:

Applicable BIS product information where relevant.

SIT:

Applicable where voluntary BIS certification is pursued.

Required testing:

- nutritional composition
- protein
- fat
- carbohydrate
- vitamins/minerals
- microbiological quality
- contaminants
- safety parameters
- packaging
- labelling

Documents / certification requirements:

Mandatory regulatory compliance should be evaluated under the current FSSAI framework and applicable infant-food regulations.

Marking requirements:

Do not represent ISI marking as automatically mandatory.

2026 special note:

This category is especially important for the assistant because **food regulation and BIS standards must not be conflated.**

Official BIS source:

[BIS — Products Under Compulsory Certification](#)

CHUNK 7**Product:**

Follow-up Formula / Complementary Food

Description:

Follow-up formulas and complementary foods are specialized foods intended for infants and young children after the early infancy stage. Their composition and labelling are subject to specific nutritional and safety requirements.

Applicable IS:

IS 15757

Standard title:

Follow-up Formula — Complementary Foods

BIS certification:

De-notified from compulsory BIS certification.

BIS's current compulsory-certification page identifies IS 15757 as de-notified.

Certification scheme:

Previously associated with compulsory BIS certification; current compulsory BIS status is de-notified.

Applicable regulatory framework:

Applicable FSSAI requirements for infant and young-child foods.

Current status — August 2026:

BIS certification: Not compulsory.

BIS standard:

Remains an Indian Standard/reference.

Product Manual:

Applicable BIS documentation where relevant.

SIT:

Applicable if voluntary certification is pursued.

Required testing:

- nutritional composition

- protein
- fat
- carbohydrate
- vitamins/minerals
- microbiological safety
- contaminants
- packaging
- labelling

Documents / certification requirements:

Applicable FSSAI licensing and regulatory compliance documentation.

Marking requirements:

Do not represent the BIS Standard Mark as mandatory solely because IS 15757 exists.

2026 special note:

This product belongs in the database because it demonstrates the relationship between **BIS standards and food-specific regulation**, even though compulsory BIS certification has been de-notified.

Official BIS source:

[BIS — Products Under Compulsory Certification](#)

CHUNK 8

Product:

Food for Special Medical Purpose Intended for Infants

Description:

Food for special medical purpose intended for infants is specially formulated for infants who have particular medical or nutritional requirements. These products require strict controls because they are intended for vulnerable consumers.

Applicable IS:

IS 17945:2022

Standard title:

Food for Special Medical Purpose Intended for Infants — Specification

BIS certification:

De-notified from compulsory BIS certification.

BIS's current compulsory-certification list identifies IS 17945:2022 as de-notified.

Certification scheme:

Previously associated with compulsory BIS certification; current compulsory status is de-notified.

Applicable regulatory framework:

Applicable FSSAI food regulations and requirements for foods for special medical purposes.

Current status — August 2026:

BIS certification: Not compulsory.

BIS standard:

Remains a technical Indian Standard.

Product Manual:

BIS maintains product-specific information for the standard.

SIT:

Applicable where voluntary BIS certification is pursued.

Required testing:

- nutritional composition
- protein
- fat
- carbohydrate
- vitamins/minerals
- microbiological safety
- contaminants
- ingredient requirements
- packaging
- labelling

Documents / certification requirements:

Applicable FSSAI licensing and regulatory documentation should be checked.

Marking requirements:

Do not state that BIS marking is compulsory in 2026.

2026 special note:

This is another important record for the assistant's **regulatory-authority differentiation** feature.

Official BIS sources:

[BIS — Products Under Compulsory Certification](#)
[BIS Product Manuals](#)

CHUNK 9**Product:**

Soluble Coffee Powder

Description:

Soluble coffee powder is coffee processed into a form that dissolves or disperses readily in water to produce a coffee beverage. It is commonly known as instant coffee.

Applicable IS:

IS 2791:2022

Standard title:

Soluble Coffee Powder — Specification

BIS's current Product Manual database lists **IS 2791:2022 — Soluble Coffee Powder**.

BIS certification:

The existence of the BIS standard does **not by itself establish compulsory BIS certification**.

Certification scheme:

Must be determined from the current compulsory-certification list/QCO status before claiming mandatory ISI certification.

Applicable regulatory framework:

Food products are also subject to applicable FSSAI requirements.

Current status — August 2026:

BIS standard exists. Compulsory BIS status must be checked against the current QCO/compulsory-certification list.

Product Manual:

BIS lists a product manual for **IS 2791:2022**.

SIT:

Where BIS certification applies or is voluntarily pursued, the applicable Product Manual/SIT governs testing.

Required testing:

Typical quality parameters may include:

- moisture
- coffee content
- soluble solids
- sensory characteristics
- contaminants
- microbiological requirements
- adulteration-related parameters
- packaging

Documents / certification requirements:

Applicable BIS documentation if certification is sought, plus applicable food regulatory documentation.

Marking requirements:

ISI marking should only be stated as mandatory after confirming the current QCO status.

2026 special note:

This is deliberately structured differently from the de-notified products above. The assistant must **verify the current compulsory status instead of assuming either “mandatory” or “not mandatory.”**

Official BIS source:

[BIS Product Manuals — IS 2791:2022](#)

[BIS Products Under Compulsory Certification](#)

CHUNK 10

Product:

Soluble Coffee-Chicory Powder

Description:

Soluble coffee-chicory powder is a soluble beverage product made using coffee and chicory components. It is processed into a powder that can be prepared as a beverage by adding water.

Applicable IS:

IS 3309:2022

Standard title:

Soluble Coffee-Chicory Powder — Specification

BIS's current Product Manual database lists **IS 3309:2022 — Soluble Coffee Chicory Powder**.

BIS certification:

The existence of IS 3309 does not automatically establish compulsory BIS certification.

Certification scheme:

Current compulsory status must be checked against the applicable QCO/BIS compulsory-certification list.

Applicable regulatory framework:

Applicable FSSAI requirements also need to be considered.

Current status — August 2026:

BIS standard exists; compulsory BIS status requires verification against the current regulatory list.

Product Manual:

BIS lists a Product Manual for **IS 3309:2022**.

SIT:

Applicable BIS Product Manual/SIT requirements where certification applies or is voluntarily pursued.

Required testing:

- coffee/chicory composition
- moisture
- soluble solids
- sensory characteristics
- contaminants
- microbiological quality
- adulteration-related parameters
- packaging

Documents / certification requirements:

Applicable BIS documentation if certification is pursued, along with relevant food regulatory documentation.

Marking requirements:

ISI marking should only be described as compulsory after verifying the current QCO.

2026 special note:

Keep this separate from soluble coffee powder because **IS 2791** and **IS 3309** are separate standards.

Official BIS sources:

[BIS Product Manuals — IS 3309:2022](#)

[BIS Products Under Compulsory Certification](#)

Important Batch 3 point

You can already see that **Food & Agriculture will be different from Household Appliances**.

For example:

IS 14543 exists

does **not** mean

BIS certification is currently compulsory.

BIS's own current page explicitly marks several historically important food products as **de-notified from compulsory BIS certification**.

For our SIH database, I strongly recommend adding these fields:

bis_standard_status

bis_certification_status

primary_regulatory_authority

applicable_qco

qco_effective_date

fssai_applicability

product_manual

standard_revision

That will prevent the assistant from giving dangerous answers like **“ISI certification is mandatory”** simply because an IS number exists.

CHUNK 21**Product:**

Cumin Seed

Description:

Cumin is an aromatic spice obtained from the dried seeds of the cumin plant. It is

commonly sold as whole seeds and used extensively in Indian cooking, spice blends and food processing.

Applicable IS:
IS 2444:1984

Standard title:
Cumin — Specification

Scope / applicability:
Applies to cumin intended for use as a food spice, subject to the exact scope of the standard.

BIS certification:
The existence of the Indian Standard does not automatically make BIS certification mandatory.

Certification scheme:
To be determined from the current BIS compulsory-certification/QCO framework.

Applicable regulatory framework:
Applicable FSSAI food-safety requirements also need to be considered.

Current status — August 2026:
BIS standard/reference; current compulsory BIS status requires verification.

Product Manual:
Applicable BIS Product Manual, where certification is applicable.

SIT:
Product-specific sampling and testing where BIS certification is pursued.

Required testing:

- Moisture
- Total ash
- Acid-insoluble ash
- Volatile oil
- Extraneous matter
- Insect damage
- Adulteration
- Pesticide residues where applicable
- Microbiological quality
- Contaminants

Documents / certification requirements:

Applicable BIS documentation where certification is pursued, together with applicable food-regulatory documentation.

Marking requirements:

ISI marking should only be stated as mandatory after confirmation of the current QCO.

2026 special note:

The AI should recognize terms such as “**jeera**” and “**cumin seeds**” as consumer-language aliases.

Official BIS source:

CHUNK 22**Product:**

Cardamom

Description:

Cardamom is an aromatic spice consisting of dried fruits and seeds of cardamom plants. It is widely used in beverages, sweets, bakery products and spice mixtures.

Applicable IS:

Relevant BIS specification depends on the type of cardamom.

Standard / classification:

BIS has separate specifications for different cardamom categories and grades.

BIS certification:

An Indian Standard does not by itself establish compulsory BIS certification.

Certification scheme:

To be determined from the applicable current QCO/BIS certification framework.

Applicable regulatory framework:

Applicable FSSAI food requirements and other relevant agricultural regulations.

Current status — August 2026:

Product-specific standard and certification status must be verified.

Product Manual:

To be identified according to the exact cardamom type.

SIT:

Depends on the applicable standard/product classification.

Required testing:

- Moisture

- Extraneous matter
- Seed characteristics
- Volatile oil
- Colour
- Insect damage
- Adulteration
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where certification is applicable.

2026 special note:

The AI should ask for the **type of cardamom** where necessary instead of assigning one generic standard.

Official BIS source:

CHUNK 23

Product:

Cloves

Description:

Cloves are dried flower buds of the clove tree and are used as a spice, flavouring ingredient and in food preparations. Quality depends on factors such as appearance, volatile oil and freedom from contamination.

Applicable IS:

IS 5198:1969

Standard title:

Cloves — Specification

Scope / applicability:

Applies to cloves intended for food use within the standard's scope.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from the current BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI food requirements.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling/testing where applicable.

Required testing:

- Moisture
- Volatile oil
- Total ash
- Extraneous matter
- Insect damage
- Broken cloves
- Adulteration
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

ISI mark only where currently applicable and certified.

2026 special note:

The assistant should distinguish **whole cloves** from processed clove products.

Official BIS source:

CHUNK 24**Product:**

Cinnamon

Description:

Cinnamon is the dried bark of certain cinnamon species and is used as a spice and flavouring ingredient. It may be sold as whole bark/quills or in processed forms.

Applicable IS:

Applicable BIS specification depends on the particular cinnamon product/type.

Standard / classification:

Product-specific BIS classification should be confirmed through the current BIS standards database.

BIS certification:

Not automatically mandatory merely because an IS standard exists.

Certification scheme:

To be determined from current QCO status.

Applicable regulatory framework:

Applicable FSSAI food requirements.

Current status — August 2026:

Product-specific verification required.

Product Manual:

To be identified for the exact product classification.

SIT:

Depends on the applicable standard.

Required testing:

- Moisture
- Volatile oil
- Ash
- Extraneous matter
- Physical characteristics
- Adulteration
- Contaminants
- Pesticide residues where applicable
- Microbiological quality

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

For an AI assistant, “**dalchini**” should be recognized as a common Indian-language query term for cinnamon.

Official BIS source:

CHUNK 25**Product:**

Mustard Seed

Description:

Mustard seeds are oil-rich seeds used as a spice and as an important raw material for edible-oil production. They are traded as whole seeds and processed into products such as mustard powder and oil.

Applicable IS:

IS 2323:1969

Standard title:

Mustard Seed — Specification

Scope / applicability:

Mustard seed intended for food and processing applications within the standard's scope.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from applicable BIS/QCO requirements.

Applicable regulatory framework:

Applicable FSSAI and agricultural/food regulations.

Current status — August 2026:

BIS standard/reference; compulsory BIS status requires verification.

Product Manual:

Applicable BIS Product Manual where available.

SIT:

Product-specific sampling/testing where applicable.

Required testing:

- Moisture

- Foreign matter
- Admixture
- Damaged seeds
- Oil content
- Physical characteristics
- Adulteration
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

ISI marking only where applicable.

2026 special note:

The AI should distinguish **mustard seed** from **mustard oil** and **mustard powder**, as these are different products.

Official BIS source:

CHUNK 26

Product:

Fenugreek Seed

Description:

Fenugreek is an aromatic seed used as a spice and food ingredient. It is commonly used whole, roasted or ground in Indian food preparations.

Applicable IS:

Relevant BIS specification for fenugreek should be verified through the current BIS standards catalogue.

Standard / classification:

Product-specific standard verification required.

BIS certification:

The existence of an Indian Standard does not automatically mean compulsory BIS certification.

Certification scheme:

To be determined from the applicable QCO.

Applicable regulatory framework:

Applicable FSSAI food requirements.

Current status — August 2026:

Product-specific BIS/QCO verification required.

Product Manual:

To be identified after confirming the applicable IS.

SIT:

Depends on the applicable standard.

Required testing:

- Moisture
- Foreign matter
- Extraneous matter
- Seed purity
- Damaged seeds
- Adulteration
- Contaminants
- Pesticide residues where applicable
- Microbiological quality

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

Include “**methi seeds**” as a searchable alias for fenugreek seed.

Official BIS source:

CHUNK 27**Product:**

Sesame Seed

Description:

Sesame seeds are oil-rich seeds used directly as food and as a raw material for sesame oil and other food products. They may be consumed whole, roasted or processed.

Applicable IS:

IS 5037:1969

Standard title:

Sesame Seed — Specification

Scope / applicability:

Sesame seed intended for food and processing applications within the standard's scope.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from the applicable QCO.

Applicable regulatory framework:

Applicable FSSAI requirements.

Current status — August 2026:

BIS standard/reference; compulsory BIS status requires verification.

Product Manual:

Applicable Product Manual where relevant.

SIT:

Product-specific sampling/testing where applicable.

Required testing:

- Moisture
- Foreign matter
- Admixture
- Damaged seeds
- Oil content
- Physical characteristics
- Adulteration
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

ISI marking only where applicable.

2026 special note:

The AI should recognize “til,” “**sesame seeds**” and “**gingelly seed**” as possible user terms depending on region/context.

Official BIS source:

CHUNK 28**Product:**

Groundnut / Peanut

Description:

Groundnuts are oil-rich edible seeds widely consumed directly and processed into products such as peanut butter, roasted peanuts and groundnut oil. Quality control focuses on physical quality and contamination.

Applicable IS:

Relevant BIS specification depends on whether the product is raw, edible, roasted or processed.

Standard / classification:

Exact BIS standard should be selected based on product form and intended use.

BIS certification:

Current compulsory status requires product-specific verification.

Certification scheme:

To be determined from applicable BIS/QCO requirements.

Applicable regulatory framework:

Applicable FSSAI food requirements.

Current status — August 2026:

Product-specific verification required.

Product Manual:

To be identified after classification.

SIT:

Depends on the applicable standard.

Required testing:

- Moisture
- Foreign matter
- Damaged kernels
- Insect infestation

- Oil content
- Physical characteristics
- Adulteration
- Aflatoxin
- Pesticide residues where applicable
- Microbiological quality

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

For food safety, **aflatoxin control** is particularly important for groundnuts and should be represented in the AI's knowledge structure.

Official BIS source:

CHUNK 29

Product:

Raisins

Description:

Raisins are dried grapes used as a food ingredient, snack and bakery ingredient. Quality depends on moisture, cleanliness, fruit condition and freedom from contamination.

Applicable IS:

IS 5190:1969

Standard title:

Raisins — Specification

Scope / applicability:

Raisins intended for human consumption within the scope of the standard.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from the applicable QCO.

Applicable regulatory framework:

Applicable FSSAI food requirements.

Current status — August 2026:

BIS standard/reference; compulsory BIS certification status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling/testing where applicable.

Required testing:

- Moisture
- Fruit condition
- Foreign matter
- Insect damage
- Sugar-related characteristics
- Preservatives where applicable
- Contaminants
- Pesticide residues
- Microbiological quality

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The assistant should distinguish **raisins** from fresh grapes and other dried fruits.

Official BIS source:

CHUNK 30**Product:**

Honey

Description:

Honey is a natural sweet substance produced by bees from floral nectar and other plant-derived sources. Quality standards are particularly important for detecting adulteration and maintaining characteristic composition.

Applicable IS:

IS 4941:1994

Standard title:**Honey — Specification****Scope / applicability:**

Honey intended for human consumption within the scope of the standard.

BIS certification:

The current compulsory BIS status must be verified against the applicable regulatory framework.

Certification scheme:

To be determined from current BIS/QCO requirements.

Applicable regulatory framework:

Applicable FSSAI food regulations are also relevant.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable BIS Product Manual where available.

SIT:

Product-specific sampling/testing where BIS certification applies.

Required testing:

- Moisture
- Reducing sugars
- Sucrose
- Acidity
- Hydroxymethylfurfural
- Diastase activity
- Electrical conductivity
- Water-insoluble solids
- Adulteration
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS documentation where certification is pursued, together with applicable FSSAI compliance documentation.

Marking requirements:

ISI marking should only be described as mandatory after current QCO verification.

2026 special note:

Honey is an excellent product for the AI's **adulteration-awareness feature** because a user may ask both about BIS standards and food-safety authenticity.

CHUNK 31**Product:**

Ghee

Description:

Ghee is a clarified milk-fat product made by processing milk or milk-derived products to remove moisture and non-fat solids. It is widely consumed in India and used in cooking, sweets and food processing.

Applicable IS:

IS 1009:2024

Standard title:

Ghee — Specification

Scope / applicability:

Ghee intended for human consumption and covered by the standard.

BIS certification:

The existence of the standard does not automatically mean compulsory BIS certification.

Certification scheme:

Current BIS/QCO status must be verified.

Applicable regulatory framework:

Applicable FSSAI dairy-product requirements also apply.

Current status — August 2026:

BIS standard/reference; compulsory BIS status requires verification.

Product Manual:

Applicable BIS Product Manual where certification is applicable.

SIT:

Product-specific sampling and testing requirements.

Required testing:

- Moisture

- Milk-fat content
- Free fatty acids
- Reichert-Meissl value
- Polenske value
- Butyro-refractometer reading
- Adulteration
- Contaminants
- Microbiological quality where applicable

Documents / certification requirements:

Applicable BIS documentation where certification is pursued, together with applicable FSSAI documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The assistant should distinguish **ghee** from butter, butter oil and other edible fats because their standards and regulatory requirements differ.

Official BIS source:

CHUNK 32

Product:

Butter

Description:

Butter is a dairy product primarily consisting of milk fat obtained by churning milk or cream. It is consumed directly and used in bakery, cooking and food processing.

Applicable IS:

IS 13690:2024

Standard title:

Butter — Specification

Scope / applicability:

Butter intended for human consumption within the scope of the standard.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from the current QCO/BIS framework.

Applicable regulatory framework:

Applicable FSSAI dairy regulations.

Current status — August 2026:

BIS standard/reference; compulsory BIS certification requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific testing.

Required testing:

- Milk-fat
- Moisture
- Milk-solids-not-fat
- Salt where applicable
- Acidity
- Adulteration
- Contaminants
- Microbiological quality

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The database should distinguish **butter**, **ghee** and **margarine/vegetable fat products**.

Official BIS source:

CHUNK 33**Product:**

Cheese

Description:

Cheese is a dairy product made by coagulating milk and separating the curd from

whey, followed by processing and sometimes ripening. Different varieties have different composition and processing characteristics.

Applicable IS:
IS 2785:2024

Standard title:
Processed Cheese — Specification

Scope / applicability:
Processed cheese and products falling within the applicable standard scope.

BIS certification:
Current compulsory BIS status requires verification.

Certification scheme:
To be determined from current QCO requirements.

Applicable regulatory framework:
Applicable FSSAI dairy-product regulations.

Current status — August 2026:
BIS standard/reference; compulsory status requires verification.

Product Manual:
Applicable Product Manual where relevant.

SIT:
Product-specific sampling/testing.

Required testing:

- Moisture
- Milk-fat
- Protein
- Total solids
- Acidity
- Salt
- Microbiological quality
- Contaminants
- Adulteration

Documents / certification requirements:
Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The assistant should ask whether the user means **natural cheese, processed cheese or cheese analogue** before selecting a standard.

Official BIS source:

CHUNK 34**Product:**

Ice Cream

Description:

Ice cream is a frozen dairy-based food product made from milk or milk products with permitted ingredients. It requires control of composition, microbiological safety and storage conditions.

Applicable IS:

IS 2802:2024

Standard title:

Ice Cream — Specification

Scope / applicability:

Ice cream products intended for human consumption within the standard's scope.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from current BIS/QCO requirements.

Applicable regulatory framework:

Applicable FSSAI regulations for frozen dairy products.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable BIS Product Manual where available.

SIT:

Product-specific sampling/testing.

Required testing:

- Milk-fat

- Total solids
- Protein
- Sugar
- Acidity
- Overrun where applicable
- Microbiological quality
- Pathogens
- Contaminants
- Adulteration

Documents / certification requirements:

Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

Do not automatically classify **frozen dessert** as ice cream. The product composition and applicable food regulations must be checked.

Official BIS source:

CHUNK 35

Product:

Milk Chocolate

Description:

Milk chocolate is a chocolate product containing cocoa ingredients, sugar and milk-derived ingredients. It is widely used as a confectionery product and must meet composition and quality requirements.

Applicable IS:

IS 1164:2020

Standard title:

Milk Chocolate — Specification

Scope / applicability:

Milk chocolate products covered by the standard.

BIS certification:

Current compulsory status must be verified.

Certification scheme:

To be determined from applicable BIS/QCO requirements.

Applicable regulatory framework:

Applicable FSSAI confectionery and food regulations.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable BIS Product Manual where available.

SIT:

Product-specific sampling/testing.

Required testing:

- Total cocoa solids
- Milk solids
- Milk fat
- Total fat
- Moisture
- Sugar
- Acid-insoluble ash
- Adulterants
- Contaminants
- Microbiological quality

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The assistant should distinguish **milk chocolate, plain chocolate, white chocolate and compound chocolate** rather than treating all chocolate products as one category.

Official BIS source:

Product:

Biscuits

Description:

Biscuits are baked food products generally prepared from flour, fat, sugar and other permitted ingredients. BIS standards can specify requirements relating to composition, quality and safety.

Applicable IS:

IS 1011:2002

Standard title:

Biscuits — Specification

Scope / applicability:

Biscuits intended for human consumption within the applicable standard scope.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from current QCO/BIS requirements.

Applicable regulatory framework:

Applicable FSSAI food regulations.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture
- Total ash
- Acid-insoluble ash
- Fat
- Protein
- Sugar
- Acidity
- Physical characteristics

- Rancidity
- Microbiological quality
- Contaminants

Documents / certification requirements:

Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

Different biscuit formulations can have different nutritional and compositional characteristics, so the exact product type should be captured.

Official BIS source:

CHUNK 37

Product:

Bread

Description:

Bread is a baked food product generally prepared from cereal flour, water, yeast or other leavening agents and permitted ingredients. It is one of the most common processed cereal foods.

Applicable IS:

IS 1483:2022

Standard title:

Bread — Specification

Scope / applicability:

Bread products covered by the applicable standard.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from the current QCO framework.

Applicable regulatory framework:

Applicable FSSAI requirements.

Current status — August 2026:

BIS standard/reference; compulsory certification requires verification.

Product Manual:

Applicable Product Manual where relevant.

SIT:

Product-specific testing.

Required testing:

- Moisture
- Acidity
- Ash
- Protein
- Fat
- Physical characteristics
- Texture
- Microbiological quality
- Mould
- Contaminants

Documents / certification requirements:

Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The assistant should distinguish **bread**, **brown bread**, **whole-wheat bread** and other specialized bread products where the applicable specification differs.

Official BIS source:

CHUNK 38**Product:**

Wheat Flour / Atta

Description:

Wheat flour is produced by milling wheat grains into flour and is widely used for bread, chapati, bakery products and other foods. Quality depends on moisture, ash, gluten and freedom from contamination.

Applicable IS:

IS 1009:1981

Standard / classification:

Applicable specification depends on the type and grade of wheat flour.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from the current BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI food requirements.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific testing.

Required testing:

- Moisture
- Total ash
- Protein
- Gluten
- Granularity
- Acidity
- Extraneous matter
- Adulteration
- Mycotoxins/contaminants where applicable
- Microbiological quality

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

For the AI, “atta,” “wheat flour” and “whole wheat flour” should not automatically be treated as identical products.

Official BIS source:

CHUNK 39

Product:

Maida

Description:

Maida is a refined wheat flour produced by milling and processing wheat to obtain a fine, relatively low-bran flour. It is commonly used for bakery products, noodles and other processed foods.

Applicable IS:

IS 1009:1981

Standard / classification:

Applicable wheat-flour specification depends on the exact product and grade.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from the applicable BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI requirements.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable Product Manual where relevant.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture
- Ash
- Protein
- Gluten
- Granularity
- Acidity
- Extraneous matter
- Adulteration

- Contaminants
- Microbiological quality

Documents / certification requirements:

Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The AI should map “**maida**” as a consumer/common Indian term while retaining the formal product classification.

Official BIS source:

CHUNK 40

Product:

Semolina / Suji / Rava

Description:

Semolina is a coarse flour or granular product obtained mainly from durum or other suitable wheat varieties. It is commonly used for foods such as upma, pasta and various bakery products.

Applicable IS:

IS 1013:2002

Standard title:

Wheat Semolina — Specification

Scope / applicability:

Wheat semolina intended for food use within the standard's scope.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from the current BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI food regulations.

Current status — August 2026:

BIS standard/reference; compulsory BIS certification requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture
- Ash
- Protein
- Gluten
- Granularity
- Acidity
- Extraneous matter
- Adulteration
- Contaminants
- Microbiological quality

Documents / certification requirements:

Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The AI should recognize “**suji**,” “**sooji**,” “**rava**” and “**semolina**” as possible user terms, while checking whether the user means wheat semolina or another granular cereal product.

CHUNK 41**Product:**

Rice

Description:

Rice is one of India's major staple cereal crops and is consumed directly or processed into numerous food products. BIS specifications address characteristics such as grain quality, moisture and foreign matter.

Applicable IS:

IS 1480:2021

Standard title:
Rice — Specification

Scope / applicability:

Rice intended for human consumption within the applicable standard scope.

BIS certification:

The existence of the standard does not automatically establish compulsory BIS certification.

Certification scheme:

Current BIS/QCO status must be verified for the particular product.

Applicable regulatory framework:

Applicable FSSAI food regulations and agricultural quality requirements.

Current status — August 2026:

BIS standard/reference; compulsory BIS status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling and testing where BIS certification applies.

Required testing:

- Moisture
- Foreign matter
- Damaged grains
- Discoloured grains
- Broken grains
- Immature grains
- Grain size
- Chalky grains
- Insect infestation
- Adulteration
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS documentation where certification is pursued, together with relevant food/agricultural compliance documentation.

Marking requirements:

BIS Standard Mark only where applicable and certified.

2026 special note:

The AI should distinguish **raw rice, milled rice, parboiled rice and specialty rice varieties** where separate standards or specifications apply.

Official BIS source:

CHUNK 42**Product:**

Wheat

Description:

Wheat is a major cereal grain used for flour, semolina and numerous processed foods. Grain quality is important for milling performance, food safety and storage.

Applicable IS:

IS 1009:1981

Standard / classification:

Applicable specification depends on the wheat type and intended use.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from the applicable QCO.

Applicable regulatory framework:

Applicable FSSAI and agricultural quality requirements.

Current status — August 2026:

BIS standard/reference; compulsory status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture
- Foreign matter
- Damaged grains
- Shrivelled grains

- Insect damage
- Test weight
- Grain characteristics
- Admixture
- Adulteration
- Mycotoxins/contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and food/agricultural documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The assistant should distinguish **wheat grain** from **wheat flour/atta** and **maida** because these are different products.

Official BIS source:

CHUNK 43

Product:

Maize / Corn

Description:

Maize is an important cereal used directly as food and as a raw material for flour, starch, animal feed and industrial processing. Quality assessment includes grain condition and contamination.

Applicable IS:

Relevant BIS specification depends on the type and intended use of maize.

Standard / classification:

Product-specific BIS classification should be confirmed through the current standards catalogue.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from the applicable QCO.

Applicable regulatory framework:

Applicable FSSAI and agricultural requirements.

Current status — August 2026:

Product-specific BIS/QCO verification required.

Product Manual:

To be identified for the exact maize category.

SIT:

Depends on the applicable standard.

Required testing:

- Moisture
- Foreign matter
- Damaged grains
- Insect infestation
- Grain characteristics
- Admixture
- Adulteration
- Aflatoxin
- Other contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and agricultural/food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

For food safety, **aflatoxin control** is particularly important for maize and should be represented in the database.

Official BIS source:

CHUNK 44**Product:**

Bajra / Pearl Millet

Description:

Pearl millet is a traditional Indian cereal widely consumed as whole grain or flour. It is nutritionally important and particularly significant in dry and semi-arid agricultural regions.

Applicable IS:

IS 9438:1980

Standard title:

Pearl Millet — Specification

Scope / applicability:

Pearl millet grain intended for food use within the applicable standard.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from current BIS/QCO requirements.

Applicable regulatory framework:

Applicable FSSAI and agricultural standards.

Current status — August 2026:

BIS standard/reference; compulsory status requires verification.

Product Manual:

Applicable Product Manual where relevant.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture
- Foreign matter
- Damaged grains
- Insect infestation
- Admixture
- Grain characteristics
- Adulteration
- Contaminants
- Mycotoxins
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and food/agricultural documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The AI should recognize “**bajra**” and “**pearl millet**” as aliases.

Official BIS source:

CHUNK 45**Product:**

Sorghum / Jowar

Description:

Sorghum is a drought-tolerant cereal widely cultivated in India and consumed as grain or flour. It is also used in animal feed and food processing.

Applicable IS:

IS 1013:2002 where applicable to wheat semolina-type products; exact sorghum classification requires verification.

Standard / classification:

The applicable BIS standard should be confirmed according to the exact sorghum product.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from current QCO requirements.

Applicable regulatory framework:

Applicable FSSAI and agricultural requirements.

Current status — August 2026:

Scope verification required.

Product Manual:

To be identified after confirming the applicable IS.

SIT:

Depends on final classification.

Required testing:

- Moisture
- Foreign matter
- Damaged grains
- Insect infestation
- Admixture

- Grain characteristics
- Adulteration
- Mycotoxins
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and agricultural/food documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The previous IS mapping should **not be treated as final**. Sorghum/jowar needs a dedicated verification step before inclusion in the production database.

Official BIS source:

CHUNK 46

Product:

Ragi / Finger Millet

Description:

Finger millet is a nutrient-rich cereal traditionally cultivated and consumed in India. It is used as whole grain, flour and in processed foods.

Applicable IS:

Product-specific BIS standard requires verification.

Standard / classification:

The exact applicable Indian Standard should be confirmed through the current BIS standards catalogue.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from applicable QCO requirements.

Applicable regulatory framework:

Applicable FSSAI and agricultural requirements.

Current status — August 2026:

Scope verification required.

Product Manual:

To be identified after confirming the applicable standard.

SIT:

Depends on the applicable product classification.

Required testing:

- Moisture
- Foreign matter
- Damaged grains
- Insect infestation
- Admixture
- Grain characteristics
- Adulteration
- Mycotoxins
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and agricultural/food documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The AI should recognize “ragi,” “nachni” and “finger millet” as possible aliases.

Official BIS source:

CHUNK 47**Product:**

Pulses / Dried Legumes

Description:

Pulses are dried edible seeds of leguminous crops such as chickpeas, lentils, pigeon peas and beans. They are major sources of plant protein and are sold whole, split or processed.

Applicable IS:

Product-specific standards exist for different pulse types.

Standard / classification:

The exact IS must be selected according to the particular pulse.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from the applicable QCO.

Applicable regulatory framework:

Applicable FSSAI and agricultural requirements.

Current status — August 2026:

Product-specific verification required.

Product Manual:

Depends on the specific pulse standard.

SIT:

Product-specific.

Required testing:

- Moisture
- Foreign matter
- Broken grains
- Damaged grains
- Weevilled grains
- Admixture
- Grain size
- Protein where specified
- Adulteration
- Pesticide residues
- Contaminants
- Microbiological quality where applicable

Documents / certification requirements:

Applicable BIS and food/agricultural documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

Do not store “pulses” as one final product if the AI needs exact BIS compliance. The system should ask for the specific pulse, such as **chana, tur/arhar, moong, urad or masoor**.

Official BIS source:

CHUNK 48**Product:**

Chickpea / Bengal Gram

Description:

Chickpea is an important pulse consumed as whole grain, split dal and flour. It is commonly known as chana and is widely used in Indian cuisine and food processing.

Applicable IS:

IS 2292:1982

Standard title:

Bengal Gram — Specification

Scope / applicability:

Bengal gram/chickpea intended for food use within the standard's scope.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from applicable BIS/QCO requirements.

Applicable regulatory framework:

Applicable FSSAI and agricultural requirements.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture
- Foreign matter
- Admixture

- Damaged grains
- Weevilled grains
- Grain size
- Physical characteristics
- Adulteration
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and food/agricultural documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The AI should map “**chana**,” “**Bengal gram**” and “**chickpea**” as related search terms but distinguish whole chickpea from **chana dal** and chickpea flour.

Official BIS source:

CHUNK 49

Product:

Pigeon Pea / Arhar / Tur

Description:

Pigeon pea is a major Indian pulse commonly consumed as split dal. It is an important source of plant protein and is traded in whole and processed forms.

Applicable IS:

IS 1692:1982

Standard title:

Pigeon Pea — Specification

Scope / applicability:

Pigeon pea intended for food use within the standard's scope.

BIS certification:

Current compulsory status requires verification.

Certification scheme:

To be determined from applicable BIS/QCO requirements.

Applicable regulatory framework:

Applicable FSSAI and agricultural requirements.

Current status — August 2026:

BIS standard/reference; compulsory BIS status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific testing.

Required testing:

- Moisture
- Foreign matter
- Admixture
- Damaged grains
- Weevilled grains
- Grain size
- Physical characteristics
- Adulteration
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and agricultural/food documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The assistant should recognize “**tur dal**,” “**arhar dal**” and “**pigeon pea**” as related consumer terms while distinguishing whole seed from split dal.

Official BIS source:

CHUNK 50**Product:**

Green Gram / Moong

Description:

Green gram is a small legume widely consumed as whole beans, split dal and sprouted food. It is an important pulse crop and food ingredient in India.

Applicable IS:

IS 12687:1989

Standard title:

Green Gram — Specification

Scope / applicability:

Green gram intended for food use within the applicable standard scope.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from the applicable QCO.

Applicable regulatory framework:

Applicable FSSAI and agricultural requirements.

Current status — August 2026:

BIS standard/reference; compulsory BIS status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture
- Foreign matter
- Admixture
- Damaged grains
- Weevilled grains
- Grain size
- Physical characteristics
- Adulteration
- Contaminants
- Pesticide residues where applicable

Documents / certification requirements:

Applicable BIS and agricultural/food documentation.

Marking requirements:

BIS Standard Mark only where applicable.

2026 special note:

The AI should recognize “**moong**,” “**green gram**” and “**mung bean**” as possible aliases. Whole green gram, split moong dal and processed moong products should not automatically be treated as the same product.

CHUNK 51**Product:**

Black Gram / Urad

Description:

Black gram is an important pulse crop consumed as whole grain, split dal and in processed foods such as papad and batter-based products. It is widely cultivated and consumed across India.

Applicable IS:

IS 12687:1989

Standard / classification:

Black gram / urad intended for food use, subject to the exact scope of the applicable standard.

BIS certification:

The existence of an Indian Standard does not automatically establish compulsory BIS certification.

Certification scheme:

Current compulsory BIS/QCO status must be verified for the exact product.

Applicable regulatory framework:

Applicable FSSAI food-safety and quality requirements also need to be considered.

Current status — August 2026:

BIS standard/reference; compulsory BIS certification status requires verification.

Product Manual:

Applicable BIS Product Manual where available.

SIT:

Product-specific sampling and testing requirements where BIS certification applies or is voluntarily pursued.

Required testing:

- Moisture
- Foreign matter
- Admixture
- Damaged grains
- Weevilled grains
- Grain size
- Physical characteristics
- Adulteration
- Contaminants
- Pesticide residues where applicable
- Microbiological requirements where applicable

Documents / certification requirements:

Applicable BIS documentation where certification is pursued, together with applicable food/agricultural compliance documentation.

Marking requirements:

BIS Standard Mark / ISI Mark only where applicable and certified.

2026 special note:

The AI should recognize “urad,” “urad dal” and “black gram” as related search terms, while distinguishing whole black gram from split urad dal and processed products.

Official BIS source:

BIS Know Your Standard

https://www.services.bis.gov.in/php/BIS_2.0/bisconnect/knowyourstandards/knowyourstandards.php

CHUNK 52

Product:

Red Lentil / Masur

Description:

Masur is a pulse obtained from the lentil plant and is commonly consumed as whole lentils or split masur dal. It is an important source of plant protein.

Applicable IS:

Product-specific BIS standard requires verification against the current BIS standards catalogue.

Standard / classification:

The exact standard should be selected according to the form and classification of the lentil product.

BIS certification:

The existence of a BIS standard does not automatically mean compulsory BIS certification.

Certification scheme:

To be determined from the current BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI and agricultural requirements.

Current status — August 2026:

Scope and compulsory-certification status require verification.

Product Manual:

To be identified after confirming the applicable IS.

SIT:

Depends on the final product classification.

Required testing:

- Moisture
- Foreign matter
- Admixture
- Damaged grains
- Weevilled grains
- Grain size
- Physical characteristics

- Adulteration
- Contaminants
- Pesticide residues where applicable
- Microbiological quality where applicable

Documents / certification requirements:

Applicable BIS and food/agricultural compliance documentation.

Marking requirements:

BIS Standard Mark only where applicable and certified.

2026 special note:

The AI should recognize “masoor,” “masur dal” and “red lentil” as related consumer terms but should verify the exact product form before assigning a standard.

Official BIS source:

BIS Know Your Standard

https://www.services.bis.gov.in/php/BIS_2.0/bisconnect/knowyourstandards/knowyourstandards.php

CHUNK 53

Product:

Chickpea Flour / Besan

Description:

Chickpea flour, commonly called besan, is produced by milling chickpeas or Bengal gram. It is widely used in Indian foods such as pakoras, sweets, snacks and batter preparations.

Applicable IS:

Product-specific BIS standard requires verification.

Standard / classification:

The applicable standard depends on whether the product is prepared from Bengal gram/chickpea and on the exact milling and processing characteristics.

BIS certification:

Current compulsory BIS status must be verified separately from the existence of the standard.

Certification scheme:

To be determined from the applicable BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI requirements.

Current status — August 2026:

BIS classification and compulsory-certification status require verification.

Product Manual:

To be identified after confirming the applicable standard.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture
- Protein
- Fat
- Ash
- Fibre
- Granularity
- Extraneous matter
- Adulteration
- Contaminants
- Pesticide residues where applicable
- Microbiological quality

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable and certified.

2026 special note:

The AI should recognize “besan,” “gram flour” and “chickpea flour” as possible consumer terms, but should distinguish them from other pulse flours.

Official BIS source:

BIS Know Your Standard

https://www.services.bis.gov.in/php/BIS_2.0/bisconnect/knowyourstandards/knowyourstandards.php

CHUNK 54

Product:

Edible Groundnut Oil

Description:

Groundnut oil is an edible vegetable oil obtained from groundnut kernels. It is widely used for cooking and food processing and requires controls against adulteration and contamination.

Applicable IS:

IS 544:2014

Standard title:

Refined Groundnut Oil — Specification

Scope / applicability:

Refined groundnut oil intended for edible use within the applicable standard scope.

BIS certification:

The current compulsory BIS status must be verified against the applicable QCO and product category.

Certification scheme:

To be determined from the current BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI edible-oil requirements also apply.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires current verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling and testing where certification applies.

Required testing:

- Moisture and volatile matter
- Insoluble impurities
- Acid value
- Iodine value
- Saponification value
- Refractive index
- Unsaponifiable matter
- Fatty-acid characteristics
- Adulteration
- Contaminants
- Packaging

Documents / certification requirements:

Applicable BIS documentation where certification is pursued, together with FSSAI compliance documentation.

Marking requirements:

BIS Standard Mark / ISI Mark only where applicable and certified.

2026 special note:

The AI should distinguish groundnut oil from other edible oils such as mustard, sunflower, soybean, coconut and palm oils because each may have different standards and regulatory requirements.

Official BIS source:

BIS Know Your Standard

https://www.services.bis.gov.in/php/BIS_2.0/bisconnect/knowyourstandards/knowyourstandards.php

CHUNK 55

Product:

Mustard Oil

Description:

Mustard oil is an edible vegetable oil obtained from mustard seeds and is widely used in Indian cooking. Its quality assessment includes chemical characteristics and checks against adulteration.

Applicable IS:

IS 546:2018

Standard title:

Mustard Oil — Specification

Scope / applicability:

Mustard oil intended for edible use within the applicable standard scope.

BIS certification:

Current compulsory BIS status must be verified against the applicable QCO.

Certification scheme:

To be determined from the current BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI requirements for edible oils.

Current status — August 2026:

BIS standard/reference; compulsory BIS status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture and volatile matter
- Insoluble impurities
- Acid value
- Iodine value
- Saponification value
- Refractive index
- Unsaponifiable matter
- Fatty-acid composition
- Adulteration
- Contaminants
- Packaging

Documents / certification requirements:

Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark / ISI Mark only where applicable and certified.

2026 special note:

Mustard oil should not be confused with mustard essential oil or mustard seed. The AI should identify the exact product before providing compliance information.

CHUNK 56

Product:

Coconut Oil

Description:

Coconut oil is obtained from coconut kernels and is used as an edible oil as well as in various food and non-food applications. Edible coconut oil is subject to quality and purity requirements.

Applicable IS:

IS 542:2018

Standard title:

Coconut Oil — Specification

Scope / applicability:

Coconut oil intended for food use within the applicable standard scope.

BIS certification:

Current compulsory BIS status must be verified against the applicable QCO.

Certification scheme:

To be determined from the applicable BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI edible-oil requirements.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling/testing.

Required testing:

- Moisture and volatile matter
- Insoluble impurities
- Acid value

- Iodine value
- Saponification value
- Refractive index
- Unsaponifiable matter
- Fatty-acid composition
- Adulteration
- Contaminants
- Packaging

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark / ISI Mark only where applicable and certified.

2026 special note:

The AI should distinguish edible coconut oil from coconut oil intended for cosmetic or industrial applications.

CHUNK 57

Product:

Sesame Oil / Gingelly Oil

Description:

Sesame oil is obtained from sesame seeds and is used as an edible oil in cooking and food preparation. It is also known as gingelly or til oil in different parts of India.

Applicable IS:

Product-specific BIS standard and current revision require verification.

Standard / classification:

The applicable BIS standard depends on the exact sesame-oil product and processing method.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from the applicable BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI edible-oil requirements.

Current status — August 2026:

Scope verification required.

Product Manual:

To be identified after confirming the applicable standard.

SIT:

Depends on the final product classification.

Required testing:

- Moisture
- Insoluble impurities
- Acid value
- Iodine value
- Saponification value
- Refractive index
- Unsaponifiable matter
- Fatty-acid composition
- Adulteration
- Contaminants
- Packaging

Documents / certification requirements:

Applicable BIS and food-regulatory documentation.

Marking requirements:

BIS Standard Mark only where applicable and certified.

2026 special note:

The AI should recognize “til oil,” “gingelly oil” and “sesame oil” as possible aliases while determining whether the product is edible or intended for another application.

Official BIS source:

BIS Know Your Standard

CHUNK 58

Product:

Vanaspati

Description:

Vanaspati is a processed edible fat traditionally manufactured from vegetable oils and used in cooking and food preparation. Its composition and processing characteristics are subject to food-quality requirements.

Applicable IS:

IS 1183:1983

Standard title:

Vanaspati — Specification

Scope / applicability:

Vanaspati intended for edible use within the applicable standard scope.

BIS certification:

Current compulsory BIS status must be verified against the applicable QCO.

Certification scheme:

To be determined from the current BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI requirements for edible fats and oils.

Current status — August 2026:

BIS standard/reference; compulsory certification status requires verification.

Product Manual:

Applicable BIS Product Manual where relevant.

SIT:

Product-specific sampling and testing.

Required testing:

- Moisture
- Acid value
- Iodine value
- Saponification value
- Refractive index
- Unsaponifiable matter
- Fatty-acid characteristics
- Trans-fat-related parameters where applicable
- Adulteration
- Contaminants
- Packaging

Documents / certification requirements:

Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark / ISI Mark only where applicable and certified.

2026 special note:

The assistant should distinguish vanaspati from ghee, butter and other edible fats. It should also take current FSSAI requirements into account rather than relying only on the BIS standard.

CHUNK 59

Product:

Jaggery / Gur

Description:

Jaggery is a traditional unrefined or minimally refined sweetener generally produced from sugarcane juice or other permitted sources. It is consumed directly and used in traditional foods and beverages.

Applicable IS:

Product-specific BIS standard requires verification according to the source and form of jaggery.

Standard / classification:

Different jaggery products may require different classification depending on raw material and processing.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from applicable BIS/QCO requirements.

Applicable regulatory framework:

Applicable FSSAI food requirements.

Current status — August 2026:

Scope and compulsory-certification status require verification.

Product Manual:

To be identified after confirming the exact jaggery category.

SIT:

Product-specific testing.

Required testing:

- Moisture
- Sucrose
- Reducing sugars
- Ash
- Insoluble matter
- Colour
- Extraneous matter
- Adulteration
- Contaminants
- Heavy metals where applicable
- Microbiological quality where applicable

Documents / certification requirements:

Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark only where applicable and certified.

2026 special note:

The AI should distinguish cane jaggery from palm jaggery and other traditional sweeteners rather than treating all “gur” products as identical.

CHUNK 60

Product:

Potato Chips / Fried Potato Products

Description:

Potato chips are thinly sliced potato products that are fried or otherwise processed to produce a crisp snack. Quality considerations include oil quality, moisture, rancidity, food additives and contaminants.

Applicable IS:

Product-specific BIS standard requires verification.

Standard / classification:

The applicable standard depends on the exact potato-based product and processing method.

BIS certification:

Current compulsory BIS status requires verification.

Certification scheme:

To be determined from the applicable BIS/QCO framework.

Applicable regulatory framework:

Applicable FSSAI requirements for processed and ready-to-eat snack foods.

Current status — August 2026:

Scope verification required.

Product Manual:

To be identified after confirming the applicable BIS standard.

SIT:

Depends on the final product classification.

Required testing:

- Moisture
- Fat
- Salt
- Physical characteristics
- Rancidity
- Acid value where applicable
- Peroxide value where applicable
- Adulteration
- Food additives where applicable
- Contaminants

- Microbiological quality
- Packaging

Documents / certification requirements:

Applicable BIS and FSSAI documentation.

Marking requirements:

BIS Standard Mark only where applicable and certified.

2026 special note:

The AI should distinguish potato chips from other extruded snacks, namkeen and cereal-based snack products because their standards and regulatory treatment can differ.
